# UiPath Marketplace Split a PDF File

Marketplace:

Like the Play Store App, the UiPath Marketplace aims to give our customers and partners the ability to do more, faster. We do that by offering the largest library of robotic process automation (RPA) content available: from custom activities to connectors to machine learning (ML) models, the Marketplace provides solutions that solve a variety of business challenges across different industries, technologies, and use cases.

Through the Marketplace Security Certification, UiPath validates the content coming from external sources and confirms you can securely download and reuse it in your automations.

Pre-built automation for UiPath Assistant:

Drive faster automation impact with the pre-built automations. This bundle features a collection of UiPath attended automations designed to help your employees with their day-to day tasks. Enable employees to access and run pre-built automations directly from the Marketplace widgets in Assistant or download this bundle to customize and share automations with your employees via Orchestrator.

Marketplace > Bundles > Pre-Built Automation for UiPath Assistant > Split a PDF File

UiPath Marketplace Split a PDF File

Split a PDF File:

Using a UiPath Form, the user selects the PDF they would like to split, the location to drop the split pages into, and a naming convention for the generated files.
The robot then quickly splits the selected PDF and dumps the resulting PDFs into the selected location.
